On behalf of the Organizing Committee it is a pleasure to invite you to the 41st Scand-LAS 2011 Symposium in Wonderful Copenhagen with the title:

What is the benefit of animal research

Many people are questioning the use of laboratory animals on ethical and welfare grounds and as we cannot replace all animal experiments in the foreseeable future, ethical considerations and animal welfare should be given high priority. As an integral part of the approach to animal research, we should constantly be looking for new ways to replace, reduce and refine the use of laboratory animals and share best practice.

The Scand-LAS 2011 Symposium will address and highlight all aspects of the 3Rs and ask questions like "Can we ethically justify the use of animals in research?", "Can the life style disease epidemic be solved without animals?", "Do we need animals for future safety testing?", and "How do we refine future animal models?" – and hope to give some of the answers.

The Symposium will further discuss the human benefit of animal research with sessions covering inflammation, obesity and diabetes, psychiatry, and cancer – along with several technical lectures, practical workshops and excursions plus submitted abstracts either presented as oral presentations or poster.

The exhibition and social program will hopefully stimulate exchange of technological progress and development within laboratory animal science – and give you a change to network with old or new colleagues and friends.

We hope that you will contribute to a successful meeting in Copenhagen and hereby invite you to the:

Scand-LAS 2011 Symposium
University of Copenhagen,
Faculty of Life Sciences (LIFE),
25-28 May 2011

Please keep you updated at
www.scandlas2011.com

On behalf of the Organizing Committee

Lars Friis Mikkelsen
Vice-President, Scand-LAS
Chair, Organizing Committee

The Scand-LAS 2011 Symposium will focus on and discuss the benefit of animal research as an overall topic – national and international speakers will help making this Symposium a milestone in laboratory animal science.

The scientific program

Karl Johan Öbrink memorial lecture
Laboratory animal ethics
3Rs – Replacement, Reduction & Refinement
One health – Synergy in human and animal research & From bench to bedside
Animal models – Neurobiology & Life style diseases
Improved techniques – Methods for monitoring distress and pain & Whole animal imaging
Inflammation, Cancer & Immunization
Teaching laboratory animal science

The technical program

Technical lectures
Practical workshops
Excursions

The social program

Welcome reception
Exhibitors evening
Gala dinner

All participants are encouraged to submit abstract for either oral or poster presentations.
